1 Capstone Project - The Battle of Neighborhoods (Week 2)

1.1 Introduction

New York City comprises 5 boroughs sitting where the Hudson River meets the Atlantic Ocean. At its core is Manhattan, a densely populated borough that's among the world's major commercial, financial and cultural centers. Its iconic sites include skyscrapers such as the Empire State Building and sprawling Central Park. Broadway theater is staged in neon-lit Times Square.

London, the capital of England and the United Kingdom, is a 21st-century city with history stretching back to Roman times. At its centre stand the imposing Houses of Parliament, the iconic 'Big Ben' clock tower and Westminster Abbey, site of British monarch coronations. Across the Thames River, the London Eye observation wheel provides panoramic views of the South Bank cultural complex, and the entire city.

1.2 1.Description of the problem

We will explore New York City and London and segmented and clustered their neighborhoods. Both cities are very diverse and are very similar. Both cities are a densely populated boroughs that's among the world's major commercial, financial and cultural centers. . We will compare the neighborhoods of the two cities and determine how similar or dissimilar they are. We will define that people like to do more in the cities, which places are often visited. Knowing this information we can think of how to use this. For example, open a new restaurant or supermarket, entertainment center or gift shop. As we can see in the next task that although there are Mexican restaurants in London, but they are not popular, entertainment is centrally located and almost none in areas farther from the center. We may also use this information for advertising purposes, etc

1.3 2. Description of Data.

This project will rely on public data from Wikipedia and Foursquare.

London is the capital of and largest city in England and the United Kingdom. It is administered by the City of London and 32 London boroughs.

We will get information about the areas of London https://en.wikipedia.org/wiki/List_of_areas_of_London

I will use dataset https://geo.nyu.edu/catalog/nyu_2451_34572 for information about boroughs of NYC

Use geopy library to get the latitude and longitude values of London. In order to define an instance of the geocoder, we need to define a user_agent. We will name our agent ny_explorer, as shown below.

```
In [50]: address = 'London, uk'

geolocator = Nominatim(user_agent="ny_explorer")
location = geolocator.geocode(address)
latitude = location.latitude
longitude = location.longitude
print('The geograpical coordinate of London, uk {}, {}'.format(latitude, longitude))
```

The geograpical coordinate of London, uk 51.4893335, -0.144055084527687.

Create a map of London with borough superimposed on top.

```
In [51]: # create map of London using latitude and longitude values

Use geopy library to get the latitude and longitude values of New York City. In order to define an instance of the geocoder, we need to define a user_agent. We will name our agent ny_explorer, as shown below.

```
In [60]: address = 'New York City, NY'

geolocator = Nominatim(user_agent="ny_explorer")
location = geolocator.geocode(address)
latitude = location.latitude
longitude = location.longitude
print('The geograpical coordinate of New York City are {}, {}'.format(latitude, longitude))
```

The geograpical coordinate of New York City are 40.7127281, -74.0060152.

Create a map of New York with neighborhoods superimposed on top.

```
In [61]: # create map of New York using latitude and longitude values
map_newyork = folium.Map(location=[latitude, longitude], zoom_start=10)

# add markers to map
for lat, lng, borough, neighborhood in zip(neighborhoods['Latitude'], neighborhoods['Longitude'],
neighborhoods['Borough'], neighborhoods['Neighborhood']):
    label = '{} {}'.format(neighborhood, borough)
    popup = folium.Popup(label, parse_html=True)
    folium.CircleMarker(
        [lat, lng],
        radius=5,
        popup=popup,
        color='blue',
        fill=True,
        fill_color='#3186cc',
        fill_opacity=0.7,
        parse_html=False).add_to(map_newyork)

Get the neighborhood's latitude and longitude values.

Now, let's get the top 200 venues that are in Manhattan within a radius of 1000 meters. First, let's create the GET request URL. Name your URL url.

```
In [72]: LIMIT = 200 # limit of number of venues returned by Foursquare API
radius = 1000 # define radius
url = 'https://api.foursquare.com/v2/venues/explore?&client_id={}&client_secret={}&v=

LIMIT)
url # display URL
```

```
Out[72]: 'https://api.foursquare.com/v2/venues/explore?&client_id=B3D1FREXU3FMFKGOXFFFWLZH1UBN
```

Send the GET request and examine the results

```

2.2 Results

Analyzing the results we can see that people in different borough of London and NYC often visit identical places, such as Italian Restaurant, Coffee Shop, Park, Pizza Place, Hotel, Gym, Fitness Center, But there are also differences in preferences, such as French Restaurant, Pub, Japanese Restaurant, Cocktail Bar, Boutique for borough of London and for borough of NYC - American Restaurant, Wine Shop, Chinese Restaurant, Sushi Restaurant, Taco Place. Also using Foursquare API and visualization we can easily see the information that we need, for example, the placement of Escape room. They are popular now, and how we can see on map there are only a few in Manhattan.

2.3 Discussion

Based on our result, we can conclude that there are few Escape rooms and if we want to open a Escape room then the best place in Manhattan is near the center and above. If to analyze Brooklyn we can see only 2 of them. That is a good decision and we are not occupied with a place at this moment.

Also analyzing area of London and New York, we see that the British prefer French Restaurant, Pub, Japanese Restaurant while the American prefer Mexican Restaurant, Chinese Restaurant, Sushi Restaurant, Taco Place.

2.4 Conclusion

Using Foursquare API, we can captured data of common places all around the world. Using it, we refer back to our main objectives, which is to determine;

the similarity or dissimilarirty of both cities classification of area located inside the city whether it is residential, tourism places, or others In conclusion, both borough cities London and NYC
